

The 43rd Banff International Conference on Behavioural Science

Disseminating Evidence-Based Practices in Children's Mental Health

March 20-23, 2011
Banff, Alberta, Canada

Over the past decade, there has been significant success in the development and evaluation of interventions based on empirically validated procedures for various childhood disorders, including internalizing (e.g., anxiety, depression) and externalizing (e.g., conduct problems, ADHD) problems. However, successful dissemination and implementation of these evidence-based interventions in "real-world" settings has proved to be a significant challenge. This three-day conference will present addresses and workshops on the latest research findings and clinical applications on the dissemination of evidence-based practices for various child and adolescent disorders. Leading scientist-practitioners from across North America will examine issues and controversies concerning effective dissemination of evidence-based practices for child and adolescent mental health. The target audience for this conference includes clinicians, researchers, and policy makers working in the field of children's mental health.
